Position Applying: Search Relevance Rater / Data Annotation Contributor

---

Professional Summary

7-year Java backend developer currently working full-time in software engineering, with part-time experience in data annotation and search relevance evaluation. Detail-oriented Chinese-native evaluator with strong analytical thinking, extensive e-commerce usage experience, and professional expertise in data-driven decision-making, content evaluation, and guideline-based judgment. Skilled in understanding complex instructions, performing consistent relevance assessments, and identifying high-quality search results for various international markets. Possesses advanced problem-solving skills from software engineering background, strong English reading comprehension, and high familiarity with online shopping patterns, user intent, and product matching logic.

Skills

Technical Background (Primary):

- Java backend development (7 years experience)
- Distributed systems development and data processing
- System architecture design and quality assurance
- Data cleaning, quality checks, and classification
- Log analysis, metrics monitoring, and troubleshooting

Data Annotation Competencies:

- Search relevance evaluation & data annotation

- Query intent analysis & product matching

- E-commerce product understanding (attributes, titles, categories)

- Guideline comprehension & quality review

- Detail-oriented judgment & analytical thinking

Additional Advantages:

- Familiar with AI, datasets, and annotation workflows

- Strong ability to interpret complex rules without supervision

- High computer literacy (fast learning for annotation tools/platforms)

- Excellent English documentation reading

- Remote collaboration & self-management

Professional Work Experience

Senior Software Engineer — EchoWave Technology

Chengdu, China | 2025.06 – Present

- Responsible for backend development of distributed systems, building computing power trading platform using Java technology stack

- Processed large-scale datasets, performed quality validation and rule-based decision tasks

- Analyzed system logs, metrics, and structured/unstructured data to ensure data consistency and system stability

- Wrote technical documentation and collaborated with teams to complete complex business requirements

Senior Developer — Yuxin Technology Group

Beijing, China | 2022.06 – 2025.06

- Responsible for backend development of banking systems using Java/Spring technology stack

- Conducted data consistency reviews across multiple systems, performing structured data audit and correction

- Ensured accuracy of metadata and search-related fields in banking systems

- Gained strong experience in guideline-driven code reviews and detail-focused technical analysis

Backend Lead — Faben Information Technology

Shenzhen, China | 2020.07 – 2022.06

- Responsible for backend system architecture design and development, managed technical teams

- Regularly performed quality checks and validation on user-submitted information and data entries

- Analyzed user behavior data, optimized system performance, improved understanding of user intent

---

Relevant Experience

Freelance Data Annotation & Evaluation (Part–Time) — Remote

Search Intent Understanding · Product Matching · Text Classification · Guideline-based Judgments

- Performed query–product matching evaluations in Chinese and English for e-commerce search improvement

- Analyzed product titles, attributes, categories, and user intents to determine search relevance levels

- Conducted consistency checks and self-review to ensure high-quality annotations

- Followed detailed multi-step guidelines and adapted quickly to updated rules

- Completed tasks on time with stable accuracy scores

Education

Bachelor of Software Engineering

Neusoft University, Chengdu | 2014 – 2018

Language Skills

- **Chinese:** Native

- **English:** Fluent (professional reading & writing)

Additional Information

- **Primary:** Java backend developer (7 years experience)

- **Part-time:** Data annotation and search relevance evaluation (utilizing spare time)

- Reliable remote workspace and stable high-speed internet

- Strong long-term task consistency and time management skills

- High familiarity with online shopping (Taobao, JD, Amazon, Shopee, etc.)

- Comfortable with repetitive, detail-driven evaluation work
